Gurugram, Haryana | P: +91 9693963450 | priyanshu.kr.sinha74@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Backend Engineer (SDE-1) with production experience building scalable microservices, distributed systems, and high-throughput APIs across EdTech and U.S. healthcare platforms. Strong applied background in AI/LLM integration and RAG pipelines, used to ship backend systems serving 9,000+ DAU in production. Comfortable owning a feature end to end — design, backend implementation, and post-launch performance tuning.

SKILLS

- **Backend & Architecture:** Python, FastAPI, Node.js, Express.js, Java, Microservices, REST APIs, GraphQL, Event-Driven Architecture, Asynchronous Processing, Webhooks, Background Workers, Distributed Systems
- **Databases & Caching:** PostgreSQL, Redis, SQL, NoSQL, Vector Databases, Caching, Data Modelling, Pandas, NumPy
- **Infrastructure:** AWS, GCP, Docker, Kubernetes, CI/CD Pipelines, Git, RabbitMQ, Firebase, Swagger
- **AI & LLM:** OpenAI API, Claude API, Azure OpenAI, Vertex AI, LangChain, LlamaIndex, Retrieval-Augmented Generation (RAG), Prompt Engineering, Embedding Models, Vector Search
- **Frontend:** React, Flutter, JavaScript

WORK EXPERIENCE

SDE-1, BACKEND ENGINEER — STUDYIQ

EdTech | Transitioned from Backend Intern to SDE-1 Backend based on production delivery

Gurgaon, India

Dec 2025 – Present

- Designed and built the backend for a mentorship platform now live in production, automating features for **zero to 9,000+ daily active users** within the mentorship feature, on an app with 10,000+ DAU and 100,000+ MAU overall.
- Built a credit-based access system for mentorship sessions (400 credits/course, 50 credits/call) with an in-app credit purchase flow; processed **25,000+ credits** in the first week of rollout.
- Engineered real-time chat using Firebase with sub-1ms message delivery, and a file-sharing pipeline (S3 upload → Firebase link storage) supporting attachments with end-to-end latency of ~3 seconds; load-tested the mentorship system at **1,200 requests/minute**.
- Built mentor and admin portals alongside the student-facing app, supporting call scheduling that handled **50+ concurrent call requests** on peak days.
- Designed the backend for a Student Performance Dashboard (SPD) that auto-generates rankings and personalized study recommendations per student, replacing manual tracking for top-enrolled courses.
- Mentorship and SPD rollouts contributed to a rise in average order value from ~₹35,000 to ~₹40,000 (~**15%**) across the app.
- Built an AI-powered news intelligence system (News2Article) to extract, filter, and categorize e-paper content into exam-relevant segments (UPSC, SSC), cutting manual editorial effort by ~**75%**.
- Implemented end-to-end ASR → LLM → TTS voice pipelines achieving sub-2-second response latency for multilingual conversational interactions.

PROGRAMMER ANALYST, BACKEND INTERN — MEDITAB SOFTWARE

Mobile Team (Technoverge) | U.S. Healthcare

Ahmedabad, India

Feb 2025 – June 2025

- Built and maintained backend services for a large-scale U.S. healthcare platform using Node.js, Express.js, and PostgreSQL, supporting high-availability application workflows.
- Diagnosed and resolved production incidents across distributed microservices, improving system stability and reducing recurrence of known failure patterns.
- Designed asynchronous processing pipelines using RabbitMQ for background jobs and inter-service communication.

PROJECTS

AI SALES INTELLIGENCE VOICE ASSISTANT (ANTRICK)

- Built a real-time multilingual AI voice assistant using Vertex AI and Chirp3, enabling bidirectional voice conversations at sub-1.5s latency.
- Built a conversation intelligence system analyzing live sales calls across 60+ behavioral and intent-based parameters to support data-driven call optimization.

EDUCATION

Chandigarh University — B.E. Computer Science

Cumulative GPA: 8.02/10.0; Scholarship: 50% fee waiver for academic performance.

July 2021 – May 2025
